

Overview

Drop-in range of food display modules provide a standard range of matching units and accessories that allow you to insert the working parts of a food service counter into any new or existing ambient counter structure.

The units are delivered ready to drop into shop-fitted service counters, custom-built breakfast bars or buffets made from stainless steel, granite, marble, wood, tiles or corian.

Our design and manufacturing techniques deliver an inviting aesthetic and convenient operation working in unison.

Flexibility enables a customised solution, providing an optimum food service layout.

Hot and chilled models are available with curved or square glass profiles for high visibility of merchandise.

Modular & Interchangeable.

Drop-in display and serving units are not designed to be fitted directly into the top of a hot-cupboard, This differs completely from the Moffat integrated Counter-Tek design where the hot-cupboard and display features are combined.

When a hot-cupboard is required a void section must be created in the counter.

The void section must be designed to support the drop in unit and allow a space for the cupboard to roll under.

Details of cut out dimensions in counter top to take drop in units and ventilation system can be found in our Drop-In users manual and spec sheets.

For all our Drop-In models Height = from work surface to the top of gantry,
Check dimensions in brochure and operational manual.
