

**Important Design Parameters**

Allowances must be made for air venting.  
 The under slung compressor must have an unrestricted air flow.  
 Vents must not be blocked, cool air from the room is drawn in through the front condensing coil and out the rear

**Warning**

Do not install unit in draughty conditions where the air movement is greater than 0.2mtr/sec.  
 e.g. near entrance/exit doors, open windows, under air conditioning units or a ceiling mounted fan  
 Do not install units where there is high radiated heat, e.g. direct sunlight, room heaters, or bright spot lights.  
 Ambient room conditions must not exceed 25°C or a relative humidity of 60%.  
 Blocked vents will cause reduced refrigeration efficiency and lead to malfunction
