

Appliance Life Expectancy

Moffat Catering Equipment appliances are designed for commercial use and are built on a robust, traditional stainless-steel platform.

Our manufacturing process prioritizes tight quality control to ensure long-lasting performance.

E&R Moffat Ltd is a Lloyd's-approved manufacturer and operates in accordance with British Standards (BS, EN, ISO 9001: 2015 Quality Systems and are verified by LRQA).

When used daily and maintained properly, our products are designed to offer a life expectancy of at least 10 years.

We guarantee full-service support and parts availability for a minimum of 7 years after purchase.

However, the actual lifespan of the equipment may vary based on usage and maintenance practices. To extend the life of your Moffat appliance, we strongly recommend:

- Regular scheduled maintenance and cleaning.
- Daily preventative care.
- At least one professional deep clean per year.

This approach helps identify potential issues early and reduces the risk of unexpected failures, ensuring continued performance and reliability over time.
